

ACROSS

- 1 The process where a cell gets rid of waste
- 2 Less salt outside the cell, causing the water to enter and cell to swell
- 3 The process where the cell brings big things in
- 4 The process of using oxygen to release energy in sugars
- 5 Only select molecules can pass in and out depending on size
- 6 Movement of molecules from high concentration to low concentration
- 7 The process of releasing energy without oxygen

DOWN

- 8 Movement that requires energy
- 9 Equal movement of water molecules
- 10 The process of changing sunlight energy into chemical energy (food)
- 11 Great amount of tightly packed molecules
- 12 Small amount of loosely packed molecules
- 13 Movement without energy
- 14 More salt outside the cell, causing the water to exit and cell to shrink
- 15 Movement of water molecules from high concentration to low concentration
